

SYSTEM AND METHOD FOR PROVIDING FINANCIAL SERVICES TERMINALS
WITH A DOCUMENT DRIVEN INTERFACE

ABSTRACT OF THE DISCLOSURE

A system and method of providing a financial services terminal, such as an ATM, with a document driven interface. The system and method include a set of interface documents, such as HTML documents, that define an interface for the financial services terminal. The financial services terminal includes an interface application, such as a browser, for accessing the set of interface documents. A core application is associated with the financial services terminal and provides various functions for overseeing transactions executed through the financial services terminal, such as transaction processing, control of financial devices, and communications with a financial data network.
